

Medal of Honored Machine Builder of RSFSR, 1981 - 1995.

In silver-plated and gilded brass, 29.2 mm wide. Late style raised mint logo "LMD" (Leningrad Mint) to the reverse of the suspension device. Unlike most similar medals of Honored titles, the Machine-BUILDER's medal is of riveted two-piece construction: the laurel branch is a separate superimposed part. Interesting artwork incorporating a space rocket.

In excellent, near mint condition. The silver finish on the medallion and gilt on the laurels are essentially pristine. The old, probably original ribbon shows only mild wear, no stains, tears or soiling.

The title of Honored Machine Builder of RSFSR was established in 1978. The medal first appeared three years later, in 1981. Relatively few were awarded.
